

RAMPRASAD KAROSHI

QA Automation Engineer | Selenium, Playwright & API Testing | Performance Testing

Pune, Maharashtra, India | +91 7498725930 | karoshiprasad92@gmail.com

LinkedIn: [linkedin.com/in/ramprasad-karoshi-06ba482aa](https://www.linkedin.com/in/ramprasad-karoshi-06ba482aa) | GitHub: github.com/prasadkaroshi

PROFESSIONAL SUMMARY

QA Automation Engineer with 4+ years of experience testing enterprise applications across Insurance and Healthcare domains. Skilled in building **Selenium (Java)** and **Playwright (JavaScript)** automation frameworks using **Page Object Model**, **TestNG**, and **Cucumber BDD**, along with functional, database, and API testing (Postman, **RestAssured**). Also experienced in **performance testing** (2+ years) — load testing, distributed testing, and application performance monitoring using **JMeter**, **JProfiler**, **AppDynamics**, and **Grafana**, including root-causing production bottlenecks and configuring master-slave distributed load tests. Comfortable across the full test lifecycle — requirement analysis, test design, execution, and defect tracking (JIRA, Azure DevOps, Mantis) — in Agile/Scrum teams.

TECHNICAL SKILLS

Automation: Selenium WebDriver, Playwright, TestNG, Cucumber BDD, Page Object Model

Languages: Core Java, JavaScript

API Testing: Postman, RestAssured (Java), RESTful Web Services

Performance Testing: JMeter (load testing, distributed/master-slave testing, concurrent user simulation, bottleneck analysis), JProfiler, AppDynamics, Grafana

Security Testing (basic): OWASP ZAP, Burp Suite

Database: SQL Server (queries, joins, database-level validation)

Version Control: Git, GitHub, GitLab

Bug Tracking: JIRA, Azure DevOps, Mantis

Cloud: AWS Cloud Concepts & Security (LinkedIn Learning prep course; AWS Certified Cloud Practitioner exam planned)

Methodologies: Agile / Scrum

Operating Systems: Windows, Linux

PROFESSIONAL EXPERIENCE

Engineer – Quality Analyst

Binary Semantics Pvt. Ltd. | July 2022 – Present

Project 1: Motor Vehicle Insurance System

Domain: Insurance | Tech: Playwright, Selenium, TestNG, JMeter, OWASP ZAP, SQL Server | Bug Tracking: Mantis, Azure DevOps

Automated policy issuance workflows for a motor insurance platform covering vehicle/customer onboarding, AI-assisted document verification, premium calculation, and claims processing, in line with IRDAI regulatory requirements.

- Analyzed Business Requirements Documents (BRD) and translated them into 1000+ test scenarios and test cases covering policy creation, renewal, and claims workflows.
- Built a Requirement Traceability Matrix to ensure full coverage of BRD requirements across test cycles.
- Performed database-level validation of policy and premium calculations directly against SQL Server, catching data-integrity defects before they reached UAT.
- Logged and tracked defects in Mantis and Azure DevOps, partnering with developers through defect triage and resolution; contributed to regression testing ahead of each release.

- Led test case review sessions with the team, reducing rework by catching scenario gaps before execution began.
- Conducted load testing on the policy creation/submission flow using JMeter, simulating 200–2500 concurrent users.

Project 2: Health & Motor Insurance Aggregator Portal

Domain: Insurance (SaaS) | Tech: Playwright, JMeter | Bug Tracking: Azure DevOps

Tested an end-to-end insurance aggregator platform covering health and motor policy journeys — quote generation, proposal submission, KYC document verification, and role-based access control — aligned with IRDAI compliance requirements.

- Analyzed Business Requirement Documents and created 200+ test scenarios covering Role Master, User Master, RBAC Permission Validation, and Forgot Password modules with full field-level and permission-matrix coverage.
- Built a structured test documentation suite including scenario banks, permission matrices, and field validation matrices to ensure traceability from requirement to execution.
- Developed and maintained a Selenium Java automation framework for KYC document upload workflows; resolved a critical file-path corruption issue in config properties caused by backslash escape characters, restoring stable cross-environment execution.
- Authored Playwright automation scripts for regression coverage of core policy flows, contributing to the highest-weighted KRA (30%) in the BSC appraisal framework.
- Conducted performance testing on the quote/proposal generation flow using JMeter, analyzing response times to identify slow-response areas.

Project 3: TDS Return Filing Portal (Form 26Q)

Domain: TDS Compliance/Tax Filing | Tech: Web Application, SQL Server | Bug Tracking: JIRA

Supported testing for an enterprise TDS Return Filing Portal enabling TAN-authenticated deductors to file Form 26Q regular returns with end-to-end challan and deduction management.

- Tested challan creation workflows including manual entry, IT portal fetch (Income Tax API integration), and bulk Excel upload with field-level validations (BSR Code — 7 digits, Challan No — 5 digits, Minor Head dropdown).
- Validated deduction entry and linking logic including challan-to-deduction mapping, re-link confirmation behavior, and Challan Link Status state transitions (Not Linked → Linked).
- Verified PAN validation against Income Tax portal data covering PAN Status (Valid and Operative), Aadhaar-PAN linking, and name mismatch detection.
- Validated filter and search functionality across Challan Serial No., Section Code, PAN of Deductee, Name of Deductee, Deductee Ref No., and Challan Link Status filters.

Project 4: Motor Insurance Platform — Performance Testing Engagement

Domain: Insurance | Tech: JMeter (distributed/master-slave), AppDynamics, Grafana | Bug Tracking: Excel-based defect tracking

Supported a performance testing engagement for a motor insurance platform, focused on distributed load testing and real-time application performance monitoring.

- Configured and executed distributed JMeter load tests using a master-slave setup across multiple machines, including secure RMI key generation for master-slave communication.
- Monitored application performance using AppDynamics (Java agent integration with Tomcat) to track transaction response times and identify bottlenecks.
- Set up real-time performance dashboards using Grafana with Telegraf and InfluxDB for infrastructure and application metrics visualization.
- Used JProfiler to identify and root-cause a performance bottleneck impacting transaction response times.

PERSONAL PROJECTS

Hybrid Test Automation Framework (Selenium + Playwright)

- Built a personal hybrid automation framework combining Selenium WebDriver and Playwright against a demo/practice web application, implementing Page Object Model, data-driven testing, TestNG-based execution and reporting, and Cucumber BDD feature files. (Currently private — available on request; GitHub upload planned.)

API Automation Framework (RestAssured, Java)

- Built an independent API test automation framework using RestAssured to validate REST endpoints, covering request/response validation, status codes, and schema checks.

CERTIFICATIONS

- Performance Engineering — Isha Training Solutions (Apr 2025)
- SQL for Testers — LinkedIn Learning
- Functional Programming with Java — LinkedIn Learning
- AWS Certified Cloud Practitioner (CLF-C01) Cert Prep: Cloud Concepts & Security — LinkedIn Learning

EDUCATION

- Bachelor of Engineering (Mechanical) — SRTM University, 2016
- Diploma in Mechanical Engineering — MSBTE, Mumbai, 2011

LANGUAGES KNOWN

English, Hindi, Marathi
